Peter Barnier —Clarence River Brushgrove

Aim : To stabilise and prevent further erosion from occurring on the river bank on a local Cane Farm. Through the construction of a timber revetment and rock wall and intensive planting process. The riverbank is quite unstable in this area where bank slumping is occurring.

♦ **The project site area at the edge of the Cane Farm, before works commenced**

♦ **Landholder commences work hand digging for the first of the pier structures to be placed.**

Funded by the Northern Rivers Catchment Management Authority

The boat leaving its wake behind.

- **The resulting action from the boats wake, in the erosion zone of the project site. Note how easily the soil is dispersed.**
- **Lomandras will be planted along the toe of the bank to assist in stabilising this area.**

Funded by the Northern Rivers Catchment Management Authority
