

## Wooloweyah Landcare

<b>Location</b>	Wooloweyah community grounds and foreshore
<b>Duration</b>	Started in June 2005
<b>Description</b>	<p>We work once a fortnight to address weeds in the shared areas around the village. Last year we removed a large infestation of Ground Asparagus from the small treed area at the bus stop. We are currently working along the eastern foreshore, treating all weeds. In zone 1, Coastal Morning Glory is the major problem and we are also freeing up juvenile casuarinas from strangling native vines.</p> <p>Our overall aim is to control weeds in natural areas and to inform other community members of the importance of weed control in the urban environment especially as the village of Wooloweyah is surrounded by National Park.</p>
<b>NRM outcomes</b>	<p>The overall benefit of our work is to help maintain the health of the foreshore vegetation which includes EEC vegetation; educate residents about plants that threaten native vegetation and reduce the amount of impact the village has on the surrounding National Park. This year we are hoping to address some of the Easter Senna in the paperbark forest. We are, however working comprehensively and systematically treating all weed threats as we come to them.</p>
<b>Funding sources or Sponsors</b>	<p>Clarence Valley Council has sponsored a funding application for assistance with works along the foreshore in 2012-2013 and has supplied small tools, signs, equipment and chemicals.</p>
